.....

Additional information PA4:

Please provide a short passage to answer the following questions.

a. Please describe how many and what research questions have been worked out during the Pupils research centre. Have the research questions been relevant for the economic key aspects of the region?

Yes we tried to answer for the two biggest economical issues of our region, the first what kind of programs can help for the lower educated youngsters, who live in smallest settlements, villages. For answering this issue we choosed the 'brick maker' work field.

At the urban part of our region, there are different problems among the youth professionals, because of the less salaries and the number of the workplaces, most of them try to find a job in the capital (Budapest), so they move from the region after school. We tried to find an answer for that issue with the 'youth touristic expert' work field, where we tried to teach them special knowledge from our region, and show them the touristic possibilities, were they can work or think in.

b. Describe if the contact between schools and local enterprises has increased within or after the pilot action. In what way does the contact occur?

We recruited the participants directly from the target group, because the target group was over the age of 18 (they had already finished their studies at the vocational schools), so we had no contacts with their schools.

c. Are there more applications for apprenticeships/jobs/internships in the participating local enterprises?

Yes in the Hotel Barátság (Lumimpex Ltd.) still running apprenticeship program, they have a cooperation with the Collage of Szolnok, in which there is a touristic department.

	yes	no
<i>d. Has the knowledge about schools and their graduates increased in the participating enterprises?</i>	x	
<i>e. Has a sustainable network for schools, enterprises and regional actors to support cooperation been developed?</i>		x
<i>f. Has the knowledge of what professional activities are possible in the region been increased?</i>	x	
<i>g. Is there an existing location – a research centre?</i>	x
